

Seneca Global Equity SMA

Monthly Update

As at 31 October 2023

Description

An actively-managed, diversified portfolio of global equities managers. The portfolio is weighted entirely toward growth type asset classes with zero exposure to defensive asset classes. Asset allocation is strategic and reviewed on a quarterly basis with tactical tilts made to take advantage of opportunities in specific regions, different manager styles and across currencies. Manager selection is driven by quantitative factors and internal and external research.

Portfolio Commentary

The model performed largely in line with sector peer group in October with both underperforming the ACWI ex Australia equity index. Global large-cap, infrastructure and Asia equity managers all outperformed. The model's underperformance was a result of allocations to global emerging market equities and global small/mid-caps.

Market Commentary

Global share markets sold off during October, as bond yields continued to rally, the MSCI All World Index down 2.7%. In the US, the S&P 500 fell 2.2%, the MSCI Europe index was down 2.9% and Asian equities were among the worst performers, falling 3.7%. Only the UK's FTSE 100 Index fared worse, declining 3.8% as interest rates have seemingly dragged their economy to a standstill.

Of the global large companies in the S&P 500, Netflix (NFLX) added 9% on stronger than expected subscriber numbers, while AI-driven earnings growth pushed Microsoft (MSFT, +7%) and Adobe Inc (ADBE +4.3%) higher. Among the worst performers were Invisalign manufacturer Align Technologies (ALGN, -40%), vaccine manufacturer Moderna (MRNA, -35%) and lithium miner Albemarle Corporation (ALB, -25%) who pulled out of the battle for ASX-listed Liontown Resources (LTR, -45%).

Liontown (LTR) was the worst performing stock on the market during October, but Neometals (NMT, -42%) and Loneer (INR, -38%) weren't too far behind.

Graphite miner Syrah Resources (SYR, +30%) was among the top performers after China imposed graphite export restrictions, reducing the global supply of that critical mineral. SYR was pipped by Tletto Minerals (TIE, +67%) who received a takeover bid from Chinese company Zhaojin Mining (1818.HK).

Outlook

While it's certainly too early to be categorical, it feels to us like sentiment is turning more positive.

Central bankers in the US and Europe have begun to signal that they might have finished increasing interest rates, and the bond market is now only pricing a 20% chance that the US Federal Reserve increases rates in December with expectations of the first US interest rate cut in June 2024.

While the RBA should raise interest rates on Melbourne Cup Day (to cool accelerating domestic inflation) the market remains uncertain and pricing a 48% chance of a 25bps interest rate increase. This implied probability is down from over 80% prior to newly appointed RBA Governor Michelle Bullocks refusal to classify the stronger-than-expected September inflation data as a "material" upside surprise in recent parliamentary testimony.

Couple this changing macro environment with the fact that historically, markets have bounced hard after 3 consecutive negative-return months (like we've just experienced) and the strong seasonality trends observed in December quarters – we think there's room for renewed optimism.

Model Portfolio performance is based on the theoretical performance of the Model Portfolio and does not take into account any fees applicable to the Model Portfolio. Actual portfolios may not perform in the same manner as the Model Portfolios, depending on customisations and timing issues. Accordingly, the actual after-tax returns you receive are likely to be different from the Model Portfolio returns and those of other investors. Rounding used in the presentation of data may result in minor variations. Past performance is no indicator of future performance. Long term performance returns show the potential volatility of returns over time. The value of investments and the income from them can fall as well as rise and is not guaranteed. You may not get back the amount originally invested. Fluctuation may be particularly marked in the case of a higher volatility Model Portfolio and the value of an investment may fall suddenly and substantially.
